CHROMITE SANDS FOR FILLING/PROTECTING OF SLIDING GATE SYSTEMS

NEOFIL – STEELSTOP

Steelstop chromite sands are intended for filling of sliding gate systems of the steel ladles. *Steelstop* protect the channel of the upper nozzle from penetration and freezing of liquid metal before the beginning of the steel casting. *Steelstop* ensure passable and free opening of the casting system.

Steelstop chromite fillers are produced on the base of dry finely grounded exactly dosage homogeneous composite, contain high quality chromite (III) ore, quartzite raw materials and specific additives.

Product Data Sheet

- | | |
|---|-----------------------|
| • refractoriness | 1730 °C |
| • Content of Cr ₂ O ₃ (III) | min 35 % |
| • Bulk density | 1.9 g/cm ³ |
| • Grain size | 0 ÷ 1 mm |

Steelstop chromite sands are ready to use materials. They are packed in 10 – 15 kg suitable for usage sacks. During the preservation *Steelstop* chromite sands have to be protected from humidity, industrial oils and dusts.
